CO2 Emissions

World map

Pointed line plot

Parallel coordinate plot

donut chart

scatter bubble plot

Symbol scatter plot

Malaysia map

Bar chart

Radial Bar Chart

Stacked Bar chart

SHEET 1

Name: Rizlan Mohamed Reza

ID: 33550166

FILTER

World Map

- Visualise global CO2 emissions effectively.
- Viewers feel familiar.

Pointed line plot

- Straight to the point plots

Donut Chart

- Visualise different population types.
- Easy to gauge proportions for low number of categories (2-5)

Parallel Coordinate

- More sophisticated idiom
- Easier to see trends and relationships between different categories/sectors

Bar/stacked Bar chart

- Visualise a category across different years.
- Simple

33550166

Focus

The two maps are the main focus.

OPERATIONS

- Users can drag sliders to view information from different years.
- Users can choose which continent to view in the Parallel coordinate plot.
- Users can hover over plot points / channels to view tooltips for further info.

DISCUSSIONS

- + Layout is clean & tidy
- + Graph's visualise information appropriately

- Parallel coordinate is difficult to implement.
- Lacking interactivity & animation.

LAYOUT

Year:

Emissions by sector

continent:
year:

country GDP

Malaysia states GDP

Malaysia states GDP

Zoom:

SHEET 3

Rizlan Mohamed Reza
33550166

OPERATIONS

- Users can drag sliders to view different time frames.
- Users can select countries of different continents in the ~~Parallel~~ Emissions by Sector plot.
- Users can zoom in on the map (Malaysia).

DISCUSSIONS

- + Layout is clean & tidy
- + Continent selection allows choice for users (as with country GDP).

- Parallel coordinate is difficult to implement
- Two bar graphs makes it repetitive
- Although the Malaysia map is zoomable, it only zooms in the middle.

LAYOUT

world emissions

Year:

Emissions by sector

Year:

Urbanization in Malaysia

Year:

Year:

Malaysian states' GDP

Center:

Zoom:

SHEET 4

Rizlan Mohameel Reza

33550166

OPERATIONS

- Users can drag the year sliders to navigate through different time frames of data.
- Users can ~~filter~~ filter different sectors to highlight them.
- Users can zoom in on Malaysian map with the slider

DISCUSSIONS

- + Layout is clean but could be better
- + The zoomable map can center on different regions so it doesn't zoom into nothing

- Too simple
- lacking interactivity

LAYOUT

CO2 Emissions

World Emissions

Emissions by sector

Urbanization Malaysia

Malaysian States' GDP

SHEET 5

Rizlan mohamed Reza

33550166

OPERATIONS

- Users can hover over plots to reveal tooltips with detailed information
- Users can utilize sliders to navigate through time to view different data.
- Users can highlight different sectors by selecting a legend.
- Users can zoom into the Malaysian map & choose which region to center.

DETAILS

- Estimated completion time 2 weeks.
- Research is needed for HTML layouts and designing with CSS.
- Needs multiple datasets & lots of cleaning & wrangling.
- Need to find a different topojson file for the Malaysian map.
